

COMPLIANCE

UL Listed Systems: Safety in Power Distribution

A listed assembly is a tested system - not a collection of individually listed parts.

THE ENGINEERING POINT

Protect the tested assembly when the system changes.

WHAT YOU'LL TAKE AWAY

1

Know what the mark covers

Understand how enclosures, bus, breakers, spacing, and construction are evaluated together.

2

Protect the tested design

Avoid field changes that alter clearances, ratings, environmental integrity, or construction.

3

Plan modifications correctly

Use manufacturer-authorized solutions or field evaluation when a change is unavoidable.

BUILT FOR Owners • Contractors • Engineers • AHJs
