

UL 891

UL 891 Switchboard Manufacturing Standards

UL 891 applies to the complete switchboard assembly - including bus, enclosure, devices, spacing, and construction.

THE ENGINEERING POINT

Engineering decisions made early prevent expensive field problems later.

WHAT YOU'LL TAKE AWAY

1

Build the tested system

Use approved component families, bus geometry, barriers, and construction methods.

2

Control manufacturing details

Maintain spacing, torque, wire-bending space, ventilation, and documented workmanship.

3

Preserve the listing

Unauthorized drilling, substitutions, bus changes, or rating violations can invalidate certification.

BUILT FOR Manufacturers • Contractors • Facility Owners
