

DATA CENTERS

# Custom Switchgear Design for Modern Data Centers

Modern switchgear must support uptime, selective protection, maintainability, and future capacity growth.

**THE ENGINEERING POINT**

Design for uptime today and expansion tomorrow.

## WHAT YOU'LL TAKE AWAY

1

### Design around topology

Coordinate main-tie-main, dual-feed, redundancy, and maintenance operating states.

2

### Protect selectively

Align breaker ratings, trip settings, fault duty, and coordination objectives.

3

### Plan for expansion

Reserve physical space, bus capacity, communications, and future feeder positions.

**BUILT FOR** Data Center Owners • Engineers • Operators
