

INDUSTRIAL AUTOMATION

Power Monitoring Systems for Industrial Automation

Power data becomes more valuable when it is integrated into the same control environment operators already use.

THE ENGINEERING POINT

Engineering decisions made early prevent expensive field problems later.

WHAT YOU'LL TAKE AWAY

1

Measure what matters

Select meters, CTs, and communications around the decisions the plant needs to make.

2

Integrate cleanly

Bring electrical data into PLC, SCADA, historian, dashboard, and alarm systems.

3

Turn data into action

Use demand, power quality, and load trends to improve reliability and operations.

BUILT FOR Plant Controls • Automation • Facility Engineering
