

LOW VOLTAGE

Low Voltage Switchboard Engineering for Facilities

The switchboard is the backbone of facility distribution - and small design decisions become major field constraints.

THE ENGINEERING POINT

Engineering decisions made early prevent expensive field problems later.

WHAT YOU'LL TAKE AWAY

1

Start with system duty

Confirm voltage, fault current, main device, bus rating, and feeder requirements.

2

Engineer the physical fit

Plan cable space, access, metering, communications, ventilation, and future changes.

3

Coordinate protection

Match breaker frames, trip functions, SCCR, and selective coordination needs.

BUILT FOR Facility Engineers • Contractors • Owners
