

GOVERNMENT INFRASTRUCTURE

PDC Site Design for Government Infrastructure

A modular power distribution center only succeeds when site civil, electrical, access, grounding, and security interfaces are...

THE ENGINEERING POINT

Engineering decisions made early prevent expensive field problems later.

WHAT YOU'LL TAKE AWAY

1

Coordinate the site envelope

Plan pad, drainage, transport route, crane access, clearances, and equipment orientation.

2

Resolve electrical interfaces

Define source, load, grounding, cable entry, controls, and communications before fabrication.

3

Document for turnover

Build inspection, labeling, testing, security, and commissioning requirements into the package.

BUILT FOR Government Owners • EPCs • Utilities
